## 1. Problem Statement:

Travel management system is to provide all facilities like transportation booking, hotel accommodation, arrangement of local places tour with guide etc. So here user can get readymade tour plan/package from team or he can submit his own plan. And according to it team

will check the arrangements and provide the package. So basically, this system will provide complete trip plan from home to destination and again home.

## 2. Features:

- Admin: Admin will have highest authority in system.
- Team: Team will be there to contact with users.
- User: User can grab available packages from team or they can submit their own itinerary/plan.
- Service Providers: Service providers can be bus/car/flight booking contact persons, local guides etc.
- User will have option to submit their custom plan.

## 3. Project Evaluation metrics:

### 3.1. Code:

- You are supposed to write code in a modular fashion
- Safe: It can be used without causing harm.
- Testable: It can be tested at the code level.
- Maintainable: It can be maintained, even as your codebase grows.

- Portable: It works similarly in every environment (operating system).
- You have to maintain your code on GitHub.
- You must keep your GitHub repo public so anyone can check your code.
- Proper readme file you have to maintain for any project development.
- You should include the basic workflow and execution of the entire project in the readme file on GitHub.
- Follow the coding standards.

### **3.2. Database:**

MongoDB is a source-available cross-platform document-oriented database program. Classified as a NoSQL database program, MongoDB uses JSON-like documents with optional schemas.

### **3.3. API Details or User Interface:**

You have to expose your complete solution as an API or try to create a user interface for your model testing. Anything will be fine for us.

### **3.4. Deployment:**

Deploy the application on your preferred service.

### **3.5. Solutions Design:**

You have to submit complete solution design strategies in High-level Document (HLD), Low-level Document (LLD), and Wireframe documents.

### **3.6. System Architecture:**

You have to submit a system architecture design in your wireframe document and architecture document.

### **3.7. Optimization of solutions:**

Try to optimize your solution on the code level, and architecture level, and mention all of these things in your final submission.

## **4. Submission requirements:**

---

### **4.1. High-level Document:**

You have to create a high-level document design for your project. You can reference the HLD form below the link.

Sample link: [HLD Document Link](#)

### **4.2. Low-level document:**

You have to create a Low-level document design for your project; you can refer to the LLD from the link below.

Sample link: [LLD Document Link](#)

#### **4.3. Architecture:**

You have to create an Architecture document design for your project; you can refer to the Architecture from the link below.

Sample link: [Architecture sample link](#)

#### **4.4. Wireframe:**

You have to create a Wireframe document design for your project; refer to the Wireframe from the link below.

Demo link: [Wireframe Document Link](#)

#### **4.5. Project code:**

You have to submit your code to the GitHub repo in your dashboard when the final submission of your project.

Demo link: [Project code sample link](#)

#### **4.6. Detail project report:**

You have to create a detailed project report and submit that document as per the given sample.

Demo link: [DPR sample link](#)

#### **4.7. Project demo video:**

You have to record a project demo video for at least 5 Minutes and submit that link .
